Los Angeles, CA

Dear Hiring Team,

I would like to express my earnest interest in your Unity engineer position. I am a junior software engineer with experience in object oriented programming, game development, and front-end development. I recently graduated from OSU with a second bachelor's degree in Computer Science. Despite beginning in Pharmacy with a Biological Sciences degree at UCSB, I sought a career that challenged my passions and creativity the way programming does. Throughout my journey to becoming a developer, I have proven myself to be an innovative, self-starting team player who excels in a fast-paced environment.

In my role at Oregon State's computer science department, I taught 1200+ students the foundations of object oriented programming, impressing the import of clean, elegant code. Building strong relationships with open communication, I supported struggling students by developing personalized lesson plans and dedicating the extra hours that allowed them to succeed. I offered a safe space for students to learn and grow while seamlessly communicating and teaching the course material.

I'm confident the combination of my skills and passions make me an ideal candidate for this position. As a child, I was always fascinated with computers and programming. I began developing basic websites for school affiliations and activities with HTML and CSS throughout high school. During my undergraduate years, I created video games as a hobby, using the knowledge of OOP, algorithms, and data structures from my courses to optimize each passion project.

With its endless capacity for growth and improvement, I'm excited for the chance to be an innovative contributor in the ever-expanding technology industry. I see this role as an opportunity in a career that holds great potential as the field continues to mold the trajectory of business and society. I look forward to hearing from you and would love to discuss my my work and interests in a personal interview. Thank you for your time and consideration.

Best Regards,

Frandy Jay-R Usi
